Proximity Warning & Alert Systems

Detect People
Protect Lives

Reduce the risk of injury or damage from vehicle collisions and near miss occurrences to personnel, assets and property.

avonwood

Vehicle to Person Alert

Reduce the risk of injury to personnel, assets and property from reach stacker collisions and near miss occurrences.

Vehicles and pedestrians

Accidents occur frequently between heavy machinery (such as reach stackers) and pedestrians because of their heavy loads. The driver's vision can be impaired because of the load, there can be blind spots and the reach stacker can be carrying loads using moving parts that could strike a pedestrian worker.

ZoneSafe Vehicle to Person is a Proximity Detection System that detects personnel working in close proximity to reach stackers, reducing the risk of accidental collisions and serious injuries.

System Overview

The in-cab control unit is fitted to the vehicle within reach of the vehicle's operator. An audible visual alarm alerts the driver every time anyone wearing an active RFID tag enters the detection zone. The unit has the capability to store and send data on each ZoneSafe application.

A detection antenna is fitted to the vehicle creating a 3-9 metre detection zone around the vehicle. More antennas can be fitted depending vehicle size. Anyone wearing an active RFID tag will be identified when they enter the detection zone.

An active RFID tag is worn by all personnel. The tag can be placed in a hi viz jacket, clipped to a lanyard or simply placed in your pocket.
